

## **Historic, Archive Document**

Do not assume content reflects current scientific knowledge, policies, or practices.

**Aphine** and **Fungine** are used by the leading commercial establishments, private estates, park departments and agricultural colleges. *They are especially adapted for the use of amateur growers because they are clean remedies and easily applied.*

These products are infinitely superior to home-made materials, because their ingredients are scientifically the most effective, and their proportions standard.

By special arrangements with the manufacturers we can send **Aphine** and **Fungine** to your address, express prepaid, on receipt of remittance as follows:

#### APHINE

50c. per half pint, 75c. per pint,  
\$1.25 per quart.

#### FUNGINE

50c. per half pint, 75c. per pint,  
\$1.15 per quart.

These prices are only slightly in excess of the regular retail selling prices, although we pay express charges.

*Known and used  
the world over*

Aphine is a concentrated liquid readily soluble in water. It is just the remedy for the control of insects infesting house plants and those of the garden.

It is easily applied as a spray, free of disagreeable odors and does not stain the foliage.

## FUNGINE

Fungine is a fungicide for the control of mildew, rust, soil fungi and other blights affecting both flower and vegetable plants.

It is a concentrated sulphur preparation readily mixing with water and is used as a spray. Unlike other sulphur preparations it does not stain the foliage.

 Our offer to send these products to you, express prepaid, appears on the last page.

*Only clean plants will develop healthy growths. Keep them free from insects and disease.*

**Aphine** destroys all sap sucking and many of the leaf eating insects.

**Aphine** destroys green, black, white fly, red spider, thrips, mealy bug, brown and white scale. These are the sucking insects which infest flower and fruit foliage and some of the vegetable plants.

**Aphine** also destroys the currant slug, cabbage worm, melon louse, and the aphid infesting the cabbage, lettuce, pea, etc., the grape and other fruits. Some of these eat the foliage, some suck the sap.

**Aphine** will cleanse your roses, chrysanthemums, asters, sweet peas, shrubbery and other garden plants of all insect pests.

**Aphine** is an excellent cleanser for decorative stock such as palms, rubber plants, crotons and other house plants.

**Aphine** does not alone destroy the insects, but invigorates plant life.

**Aphine** can be used as a spray, wash or dipping solution. Full directions on each can.

**Fungine** is proving its efficiency in the control of fungous diseases where Bordeaux mixture and lime and sulphur fail.

**Fungine** is an infallible remedy for rose mildew, carnation and chrysanthemum rust. It will destroy the fungi, but unlike other sulphur remedies it *does not stain* the foliage but cleanses it.

**Fungine** has proven effective against the tomato and cucumber blight, lettuce wilt, celery rust and various fungi troublesome to vegetables and fruits.

**Fungine** is diluted with water and when so mixed contains no sediment as do other sulphur preparations. It is used as a spraying material. Full directions on each can.

**Aphine and Fungine can be applied to all flowers, foliage, fruits and vegetables.**

*The manufacturers of Aphine and Fungine possess hundreds of endorsements from entomologists, expert floriculturists, park superintendents and private gardeners. These have been published in the past in much of their literature.*

You can readily convince yourself of the merits of **Aphine** and **Fungine** by giving them a test. Once you try them, you will always use them.
